

# Beyond the fault code.

Automotive intelligence.  
Grounded in evidence.

---

## 01 The problem

A fault code is an entry point. Workshops still need to establish context, examine hypotheses and decide what to check next.

## 02 The direction

Develop an AI assistant that structures diagnostic reasoning and connects recommendations to supporting technical evidence.

## 03 The current stage

Early technical prototype. No licensed VAG corpus acquired.  
Data access and workshop validation are work still to be done.

**Discuss the project**
